

SLURRY PREMIX TANK ROTATING TANK MODEL

Shell-O-Matic premixing tanks are available in a rotating and non-rotating version (water drop shape).

The wetted parts of these tanks are all made of high-quality stainless steel to ensure tank longevity and to prevent foreign material contamination. Depending on your needs, we can offer an air-driven or electric propeller mixer.

If you need to save time on the slurry preparation while making sure of a proper ingredient suspension, we can also propose a high-shear mixer. This new mixing technique reduces the mixing time to a minimum. Just give us your slurry parameter requirements and we will offer you a premixing tank you can depend on.

We can also provide slurry transfer pumps to facilitate the replenishment of your slurry tanks.

- » All wetted parts are made of high-quality stainless steel.
- » Various mixers are available to match your process or save on your preparation time.
- » Robust and reliable tanks made to the highest standards.
